WeatherFile Kiosk Documentation

Last Updated: June 2017

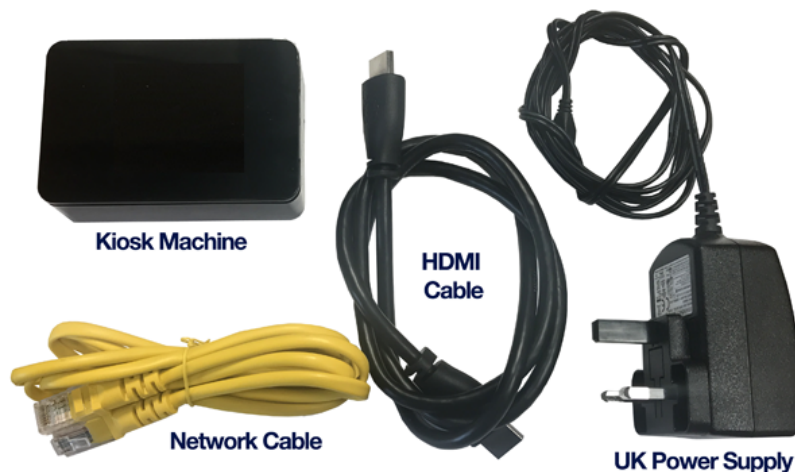

The **WS Kiosk** is a simple device, which allows a user to display their WeatherFile location data on a display or television, via the standard HDMI connection.

Its purpose is to display live wind speeds, wind direction and temperature (in celcius), dewpoint (in celcius), pressure (in hPa), relative humidity (in %) and rainfall (in mm) when available.

Whats In the Box?

The Kiosk arrives with the following components;

- 1 x Kiosk machine presented in slim black case
- 1 x UK Power Supply
- 1 x HDMI cable (1 metre)
- 1 x yellow Ethernet (RJ45) cable (1 metre)

Installation

The WS Kiosk is simple to install, it arrives pre-programmed to your designated location therefore requires no configuration.

NOTE: Please make sure you connect one end of the yellow network cable to the Kiosk and the other end to your router, and one end of the HDMI to the Kiosk and the other to your television/monitor **BEFORE** connecting the UK power supply to the device.

Failure to do so may mean the Kiosk does not boot correctly.

Support

Your Kiosk is shipped with a serial number, which is an important way of identifying the system and for Richard Paul Russell Ltd to offer support. If you require help with your system, please be sure to quote it when contacting us.
